Ex 15) Analysis of various Types of Servers using webALIZER

Aim:

To analyse the web server log file using the webalizer tool and study various server statistics such as numbers, requests, visitors, transfered data, and response status codes.

Algorithm:

1. Start the webalizer application
2. Install and configure webalizer on system.
3. Locate the web server access log file
4. Run webalizer on the selected log file.
5. Webalizer reads and analyzes the server log file.
6. It generates statistics such as:
   * Number of visits
   * number of requests
   * page accessed
   * Data transferred
   * HTTP response code
7. Open the generated HTML report in web browser.

8. Analyze the server activity using the generated graph and tables

Input:

web server access log files containing info such as:

- client IP
- Date and Time
- Requested URL
- HTTP Method
- HTTP status code
- Byte transferred

Example input:

access log

output:

webalizer generates an HTML-based statistical report containing

webalizer statistics:

- Total Requests : 1250
- Total visits : 480
- Total Bytes : 15.4 mb

Result:

Thus, the webalizer tool was used sucessfully to analyze web server log files, and various server statistics such as request, visitors, pages
