Setup & configure LAN using a switch and Ethernet cables

What is LAN?

A Local Area Network (LAN) connects devices within a limited area such as a home school or office & allows devices to share data, printer and other resources through a network switch

How to setup a LAN

1) plan network topology and arrange devices
2) connect 4 computers to switch using Ethernet cables
3) Assign Ip address
4) Configure switch with Ip 10.1.1.5
5) Check connectivity using the ping command
6) Share a folder with Computers on the LAN

7) Access the shared folders from others computers.

Result:

Thus the setup and configure a LAN using a switch and Ethernet cable as studied.
